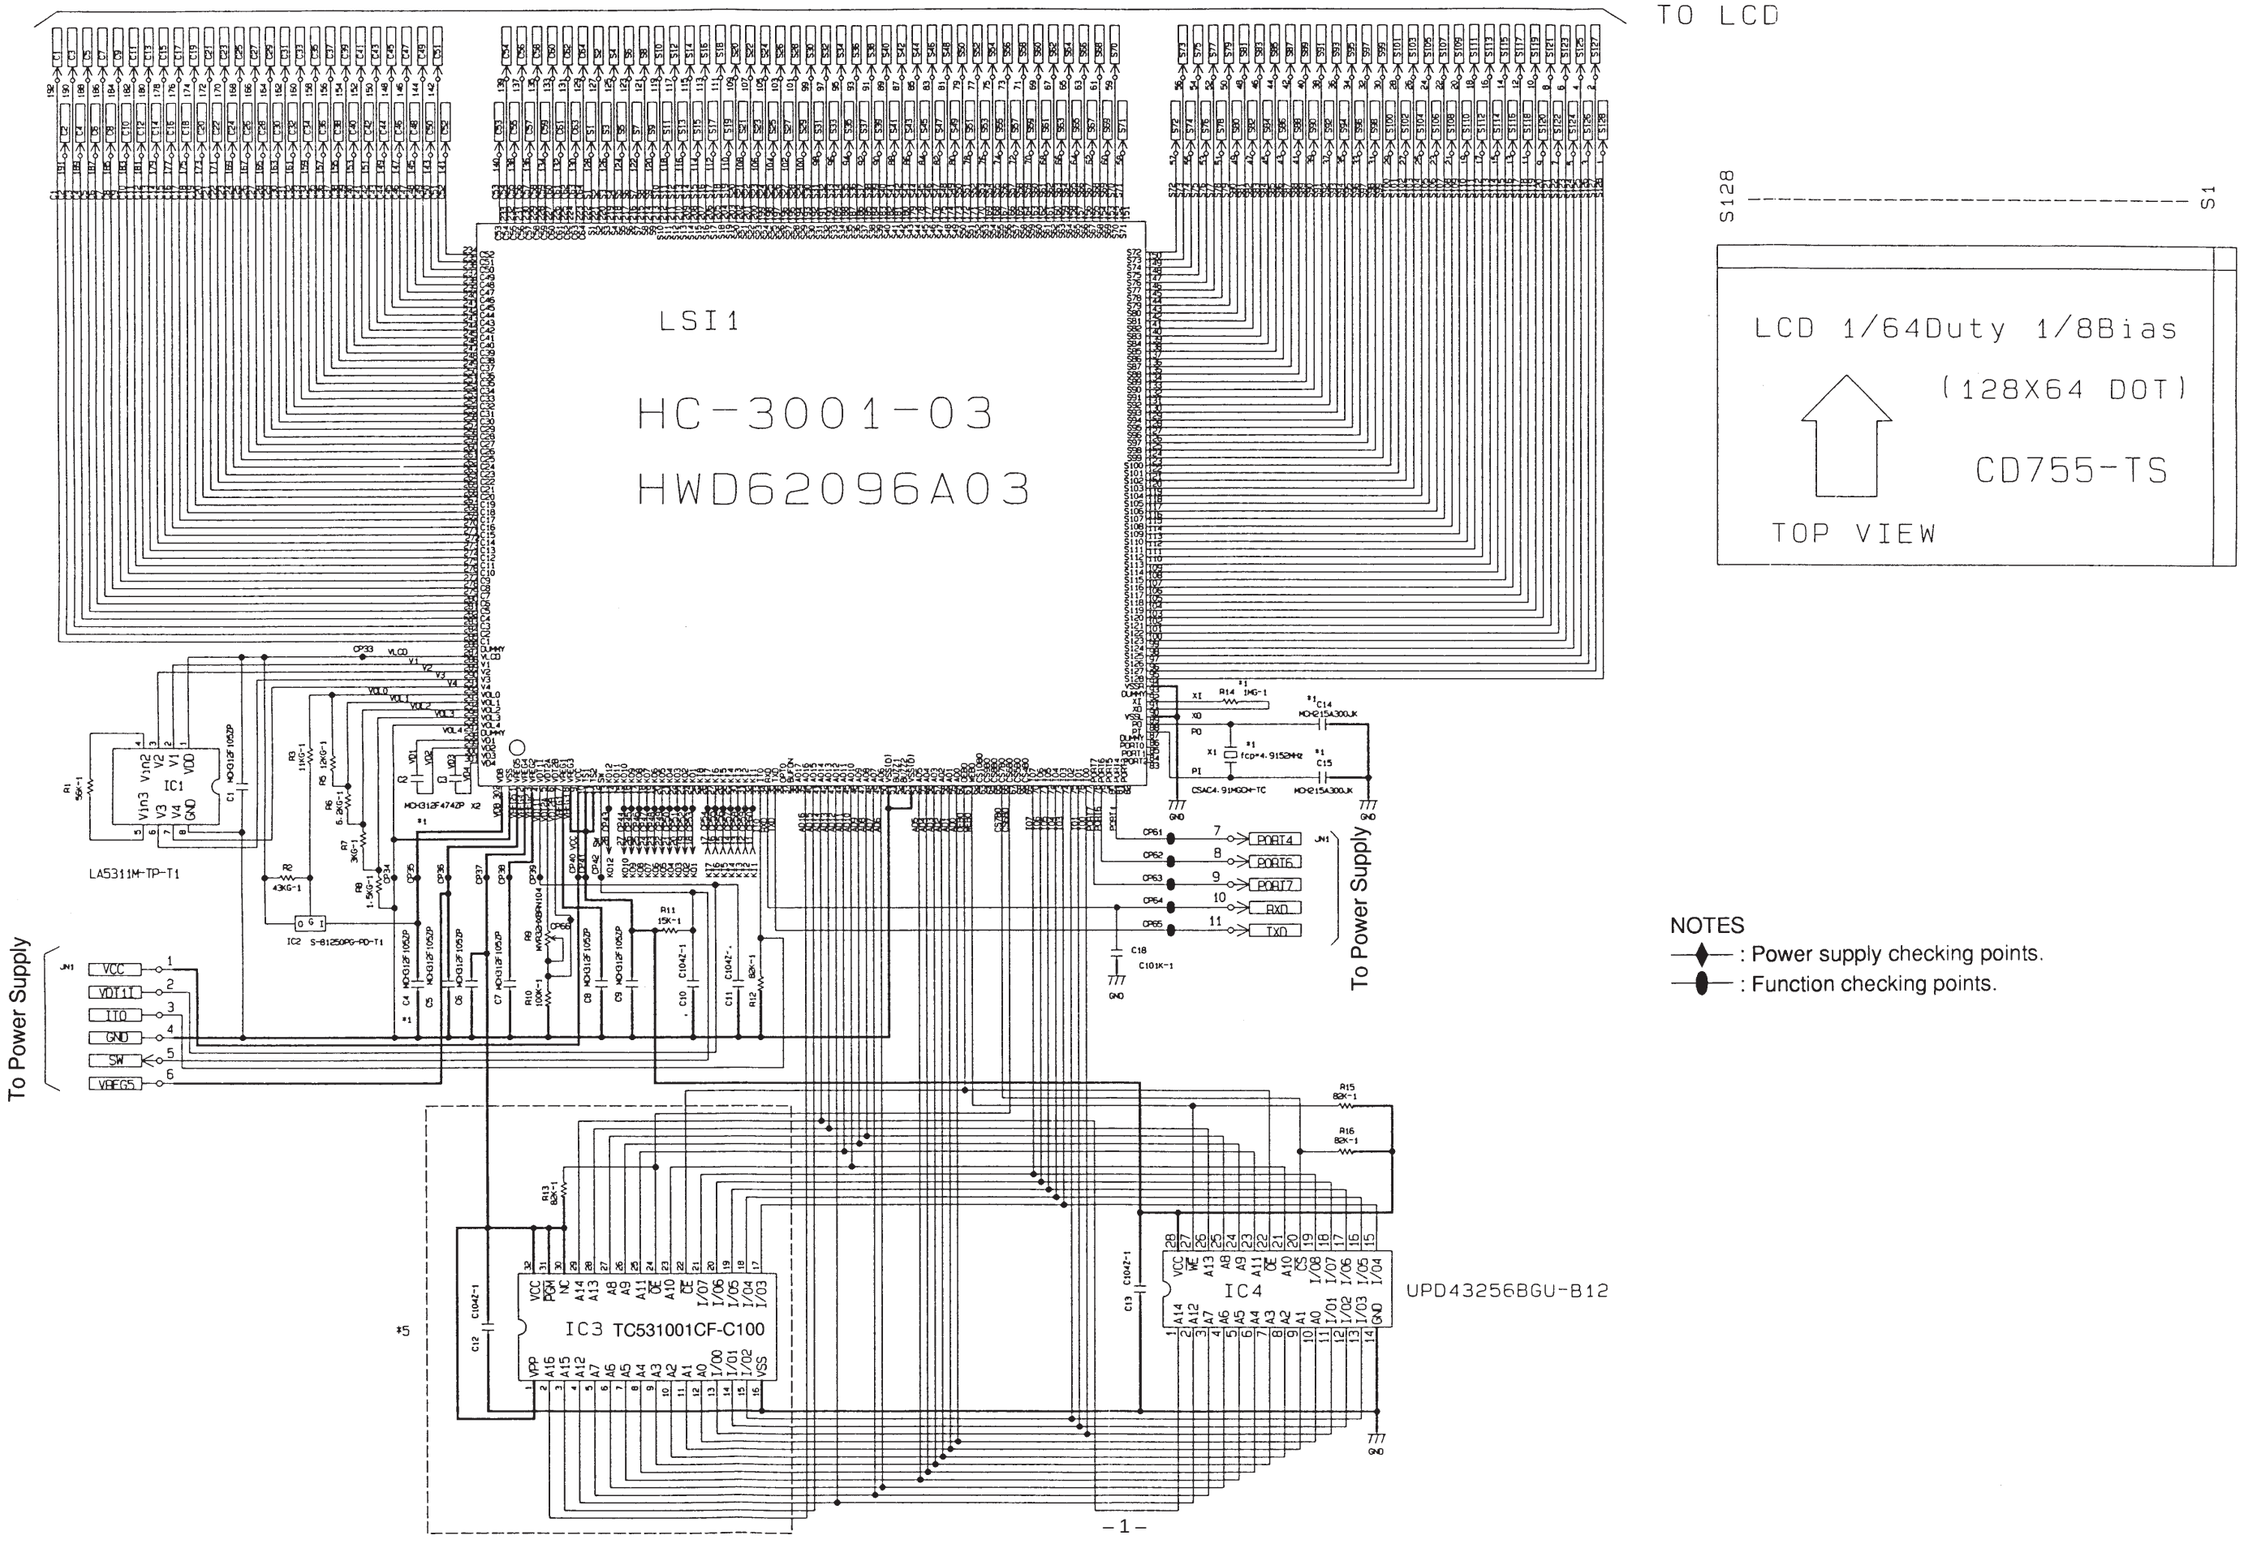
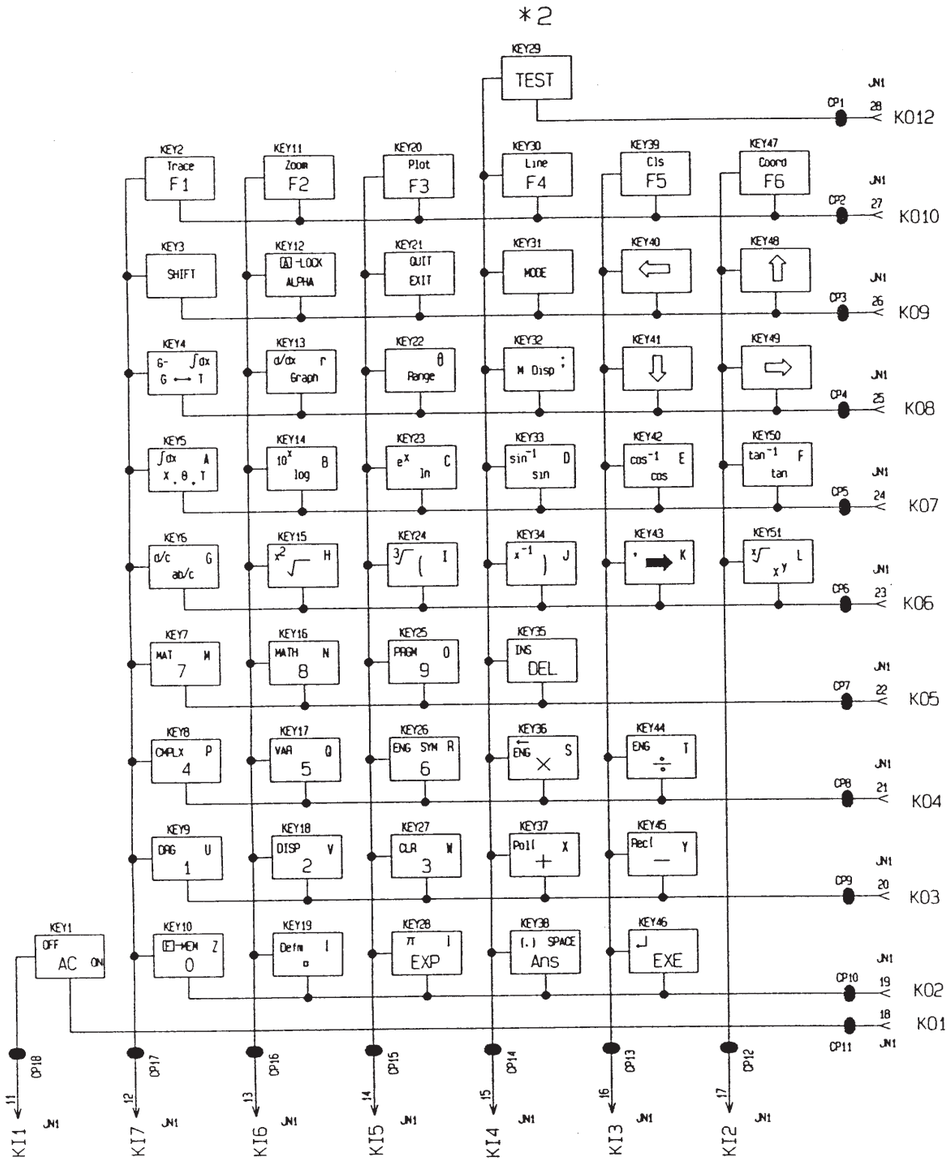
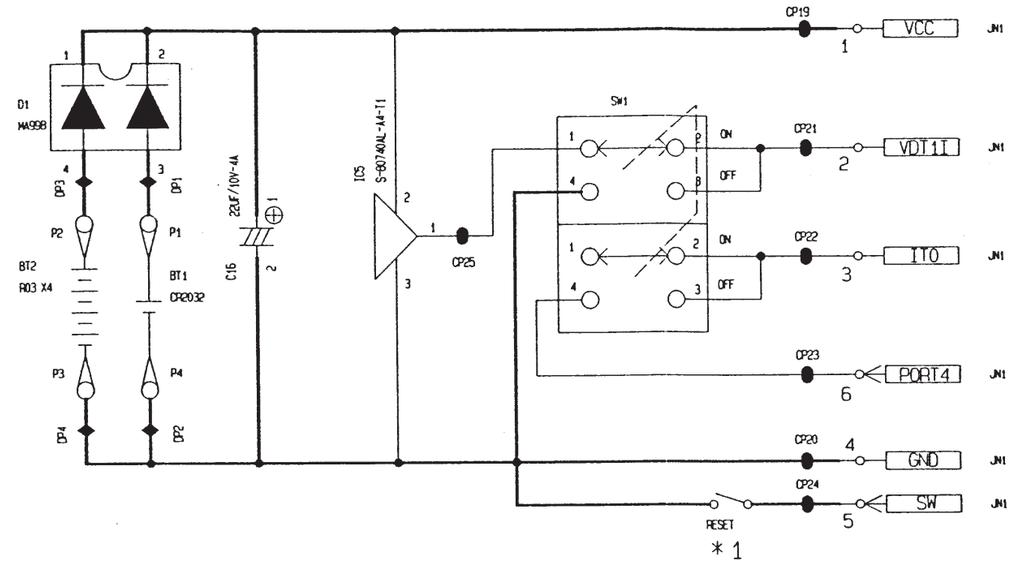
1. SCHEMATIC DIAGRAM

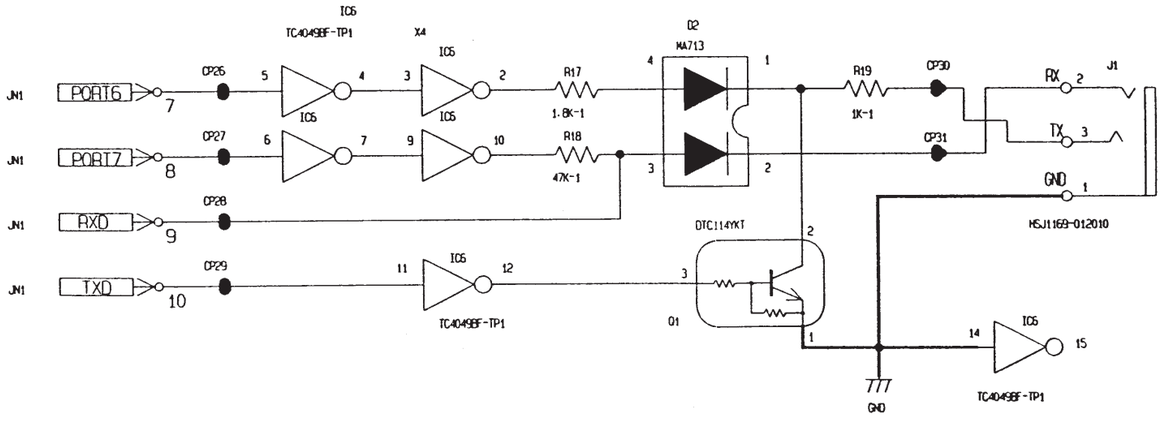
1-1. Main PCB



1-2. Power Supply



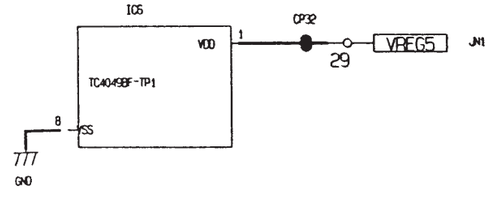




NOTES

◆ : Power supply checking points.

● : Function checking points.



2. SPECIFICATIONS

Display system: 21-character × 8-line liquid crystal display; 12-digit mantissa and 2-digit exponent for calculations; displays binary, octal, hexadecimal, sexagesimal values, fraction, complex number

Power supply: Main: Four AAA-size batteries (LR03 (AM4) or R03 (UM-4))
Memory protection: One CR2032 lithium battery

Power consumption: 0.1W

Battery life: Main: Approximately 650 hours (continuous display of 0.) with battery type LR03 (AM4)
Approximately 350 hours (continuous display of 0.) with battery type R03 (UM-4)
Approximately 2 years (power switch off) with LR03 (AM4)/R03 (UM-4)
Memory protection: Approximately 15 months

Auto power off:
Power is automatically switched off approximately six minutes after last operation except when drawing dynamic graphs.

Ambient temperature range: 0°C ~ 40°C (32°F ~ 104°F)

Dimensions: 20mm H × 85mm W × 172.5mm D ($^3/_4$" H × $3^3/_8$" W × $6^3/_4$" D)

Weight: 218.5g (7.7 oz) including batteries

Accessories: Hard case

Current Consumption

	TYP [µA]	MAX [µA]
ON (MENU)	————	20.7
OFF	1430.22	2026.60

		COM OK

5. DATA COMMUNICATIONS

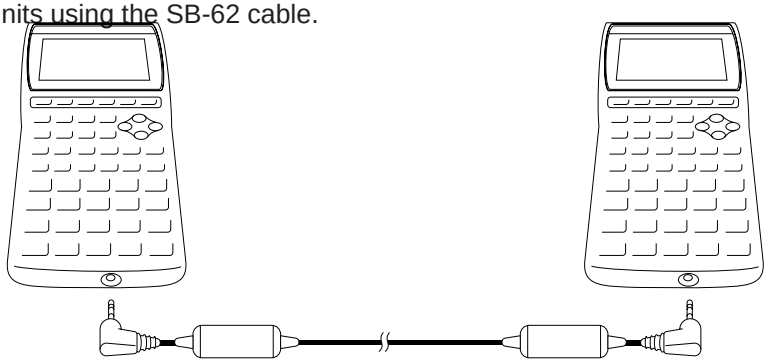
- Through you can transfer programs between the fx-9700GE and another fx-9700GE, an fx-7700GB, an fx-7700GE or an fx-8700GB, all of the examples in this manual cover data transfer with another fx-9700GE only.

5-1. Connecting Two fx-9700GE Units

The following procedure describes how to connect two Power Graphic units with an optional SB-62 connecting cable for transfer of programs between them.

To Connect Two fx-9700GE Units

1. Check to make sure that the power of both fx-9700GE units is off.
2. Remove the covers from the connectors of the two Power Graphic units.
   - Be sure you keep the connector covers in a safe place so you can replace them after you finish your program communications.
3. Connect the two units using the SB-62 cable.



SB-62 cable

Important

- Keep the connectors of the fx-9700GE covered when you are not using them.

5-2. Before Starting Data Communications

Before actually starting data communications, you should first enter the LINK Mode from the Main Menu.

To Enter the LINK Mode

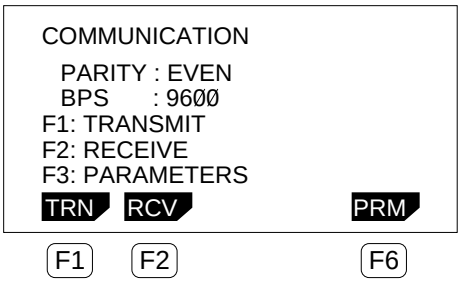
Highlight the **LINK** icon on the Main Menu.

[MENU]

[▲][▼][◀][▶]

Press [EXE] to display the LINK Mode.

[EXE]



The following are the operations that can be selected from the function menu at the bottom of the display, Press the function key below the operation you want to perform.

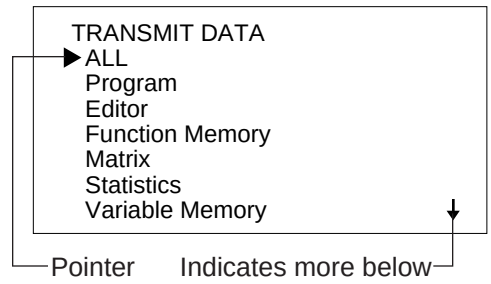
[F1] (TRN) ..... Transmit
[F2] (RCV) ..... Receive
[F6] (PRM) ..... Parameter settings

About the Data Type Selection Screen

Whenever you press F1 (TRN) to send data or F2 (RCV) to receive data, a data type selection screen appears on the display.

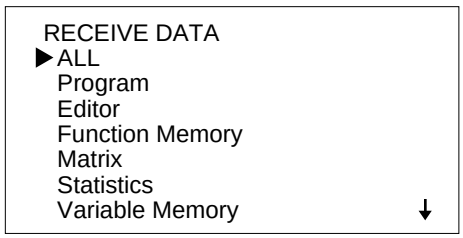
Send Unit

F1 (TRN)



Receive Unit

F2 (RCV)



The following table describes what each of these items means. You will learn later how to make a selection using these screens.

Selection	Meaning
ALL	All data from Program to Equation
Program	Program data
Editor	File names and file data
Function Memory	Function memory contents
Matrix	Matrix memory contents
Statistics	Single-variable and paired-variable statistical data
Variable Memory	Value memory and extended memory contents
Range	Graph range parameters
Factor	Factor function zoom ratios
Table	Table & Graph function data
Graph Function	Graph functions
Dynamic Graph	Dynamic Graph function data
Equation	Equation coefficients
Back Up	All memory contents, including mode settings

Note

- If the selections you make on the send unit and receive unit do not match, a TRANSMIT ERROR will be generated on the sender and a RECEIVE ERROR will be generated on the receiver.

5-3. Setting Communications Parameters

Before you can perform data communications, you must first set up cartain hardware parameters to make sure that the two units are able to understand each other. The parameters of the sender and the receiver must be identical for them to be able to communicate correctly. There are two hardware parameters that you can set.

Parameter	Settings
PARITY	EVEN ODD NONE
Speed (BPS)	1200 2400 4800 9600

To Set fx-9700GE Parameters

Starting from the LINK Mode:

[F6](PRM)

Pointer

```
PARAMETERS
▶PARITY
 EVEN  ODD   NONE
 BPS
 1200   2400   4800   9600
TO SELECT : [ ↓ ] [ ↑ ]
            [ ← ] [ → ]
TO SET    : [ EXE ]
```

* The parameters that are currently set are highlighted on the display.

The pointer indicate which parameter you can change. Use ◀ and ▶ to move the highlighting and change the parameter where the pointer is located.

▶ ▶

```
PARAMETERS
▶PARITY
 EVEN  ODD  NONE
 BPS
 1200   2400   4800   9600
TO SELECT : [ ↓ ] [ ↑ ]
            [ ← ] [ → ]
TO SET    : [ EXE ]
```

Use ▲ and ▼ to move the pointer up and down.
After the parameters and highlighted the way you want, press [EXE] to store them.

[EXE]

```
COMMUNICATION
  PARITY : NONE
  BPS    : 9600
```

- To abort the parameter setting procedure and return the settings to what they were before you changed them, press [AC] before pressing [EXE] to store the parameters.

5-4. Using ALL, Range, and Factor

The following procedures show how to send data using ALL, Range, and Factor from one fx-9700GE unit to another. The example procedure shows an operation using ALL only, but the procedures for Range and Factor are identical.

• To send data using ALL

Send Unit

Starting from the LINK Mode, press the function key to enter the send mode.

[F1] (TRN)

```
TRANSMIT DATA
▶ALL
 Program
 Editor
 Function Memory
 Matrix
 Statistics
 Variable Memory ↓
```

Make sure that the pointer is located at ALL, and press [EXE] to specify it as the data type.

[EXE]

```
= =  RECEIVE = =
ALL

YES                NO
```

F1 F6

Press [F1] (YES) to start the send operation, or [F6] (NO) to abort without sending anything.

[F1] (YES)

```
= =  RECEIVING = =

ALL DATA

TO STOP   : [ AC ]
```

* Pressing AC interrupts the send operation and returns to the LINK Mode.

The following appears after the send operation is complete.

```
COMMUNICATION
COMPLETE
ALL DATA

     PRESS  [ AC ]
```

* Press AC to return to the LINK Mode.

Receive Unit

Starting from the LINK Mode, press the function key to enter the receive mode.

[F2] (RCV)

```
RECEIVE DATA
▶ALL
 Program
 Editor
 Function Memory
 Matrix
 Statistics
 Variable Memory ↓
```

Make sure that the pointer is located at ALL, and press [EXE] to specify it as the data type.

[EXE]

```
= =  TRANSMIT = =
ALL

YES                NO
```

F1 F6

Press [F1] (YES) to start the receive operation, or [F6] (NO) to abort without receiving anything.

[F1] (YES)

```
= =  TRANSMITTING = =

ALL DATA

TO STOP   : [ AC ]
```

* Pressing AC interrupts the receive operation and returns to the LINK Mode.

The following appears after the receive operation is complete.

```
COMMUNICATION
COMPLETE
ALL DATA

     PRESS  [ AC ]
```

Warning!
Transferring data using ALL causes data in the applicable memory areas of the receiving unit to be replaced by the received data. Make sure that you do not need the data stored in the receiving unit before you start an operation using ALL.

5-5. Data Communications Precautions

Note the following precautions whenever you perform data communications.

- A TRANSMIT ERROR occurs whenever you try to send data to a receiving unit that is not yet standing by to receive data. When this happens, press AC to clear the error and try again, after setting up the receiving unit to receive data.
- A RECEIVING ERROR occurs whenever the receiving unit does not receive any data approximately six minutes after it is set up to receive data. When this happens, press AC to clear the error.
- A TRANSMIT ERROR or RECEIVE ERROR occurs during data communications if the cable becomes disconnected, if the parameters of the two units do not match, or if any other communications problem occurs. When this happens, press AC to clear the error and correct the problem before trying data communications again. In this case, any data received before the problem occurred is cleared from the receiving unit's memory.
- A MEMORY FULL operation occurs if the receiving unit memory becomes full during data communications. When this happens, press AC to clear the error and delete unneeded data from the receiving unit to make room for the new data, and then try again.

6. TROUBLESHOOTING

SYMPTOM	CAUSE	SOLUTION
Intermittent display	Dirt or poor contact on battery	Clean or adjust pressure of contact
	Poor contact on power switch	Clean or replace power switch
	Poor connection on PC joiner	Resolder or replace
	Poor soldering on LSI, capacitor, or resistor	Resolder
No display at all	Weak battery	Replace battery
	Dirt or poor contact on battery	Clean or adjust pressure of contact
	Poor contact on power switch	Clean or replace power switch
	Poor connection on PC joiner	Resolder or replace
	Defective LSI, capacitor, or resistor	Replace
Erratic display	Poor contact between LCD and PCB	Replace the heat seal
	Poor soldering on LSI	Resolder or replace display PCB ass'y
Certain key does not function	Dirt on key contact	Clean or replace contact
	Heavy key motion	Clean or replace the key
	Poor soldering on LSI	Resolder
	Defective LSI, capacitor, or resistor	Replace
All keys do not function	Constant contact is made on a certain key	Separate the contact
	Defective LSI, capacitor, or resistor	Replace
Heavy key motion	Dirt or scratch on the key	Clean or replace the key
